MOVE®

MOTORISED BLINDS
MADE MORE AFFORDABLE

Designed Blinds Australia is proud to introduce a brand new motorised system set to revolutionise the automated window furnishing market.

LET US MOVE YOU

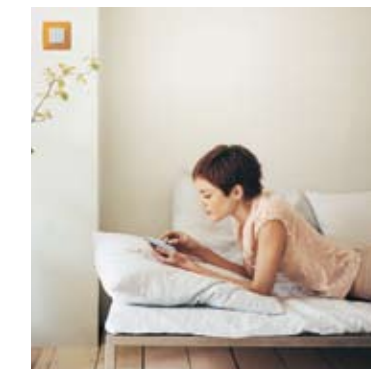

Thanks to Designed Blinds Australia, now everyone can afford motorised blinds.

A MOVE® motorised system can cost less than half as much as other systems on the market.

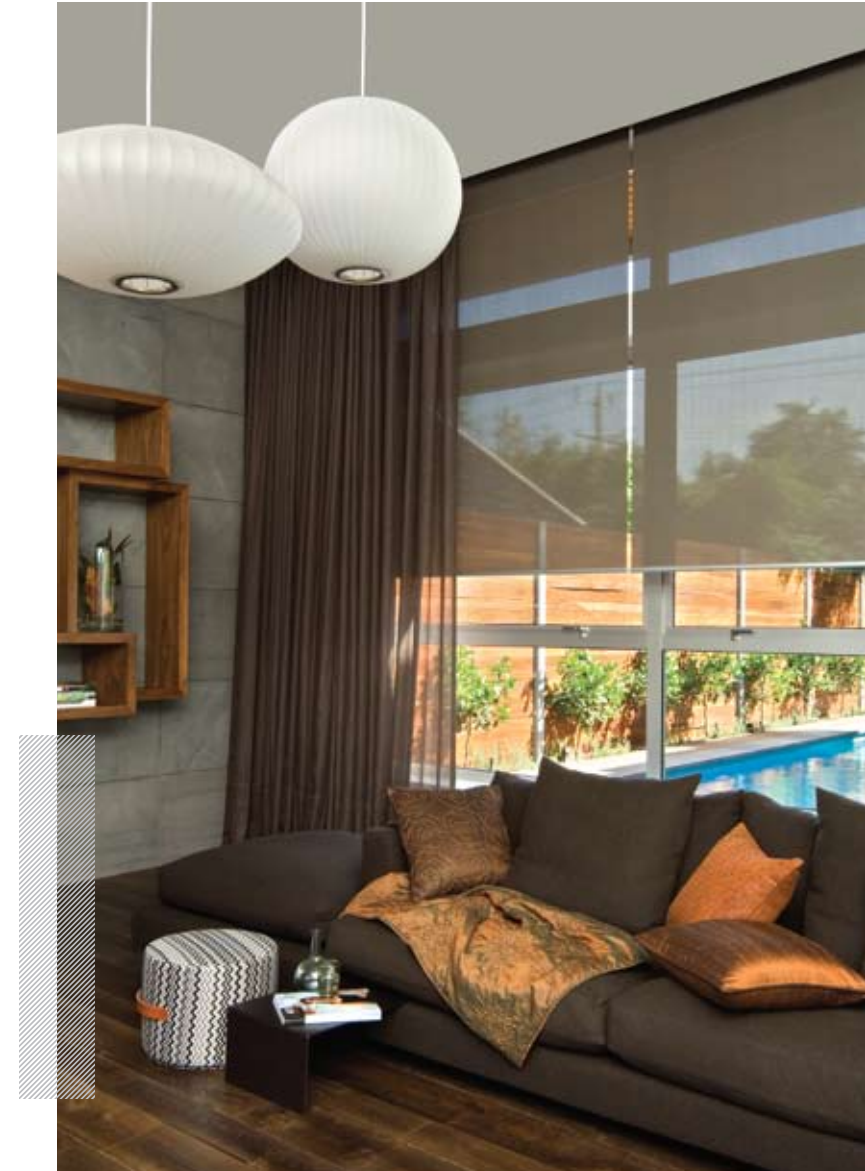

MOVE® is exclusive to Designed Blinds Australia so now you can enjoy low cost motorisation on all BEACH®, INIKA®, KAI®, LOGIC® and 50MM® blinds.

The quiet and discreet operation of MOVE® makes it perfect for every area in the home, including the bedroom, family and entertainment areas.

MOVE® motorisation systems are the perfect solution for blinds that are in hard to reach, or in out of the way places. It is all about making life just a little bit easier at an affordable price.

LET US MOVE YOU

Effortless control

Imagine effortless control of your blinds for a lot less than you would expect to pay. A MOVE® motorised system allows you to move almost any blind with the simple touch of a button.

A 5-year warranty

Manually operated blinds are subject to excessive wear and tear when handled roughly, whereas the smooth, controlled movements of MOVE® motorised blinds can extend the lifespan of your window furnishings.

MOVE® motorised blinds have been rigorously tested to meet the highest of standards. That's why we guarantee our motorised systems with a 5 year warranty.

The flexibility of MOVE® motorisation means that up to three blinds can be operated from the one motor – linking around corners of up to 90 degrees is also possible.

MOVE® also eliminates the need for manual lifting, so it's a great option for the elderly or for people with limited mobility.

Elegant ambience

MOVE® motorisation puts you in control with a flexibility not provided by manual systems.

Now you can create the right ambience to match your environment and mood with the touch of a button - from up to 50 metres away.

Imagine being able to darken an entire room at the touch of a button. MOVE® brings your home theatre experience to life when combined with our Blackout Side Channel system.

And with no chains or cords, you can enjoy a more sophisticated interior with clean, minimalist lines.

Discreet and versatile

MOVE® is very discreet. The only component of the motorised blind visible to anyone is your stylishly wall mounted switch or hand held remote.

MOVE® motorised blinds can be linked together, thereby reducing the gaps between blinds and reducing costs further still. Perfect for bay windows and tricky corners.

Programmable Timers

Easy to use timers can be programmed to raise or lower your blinds at any time, day or night – even when you're out for the day or away on holiday. You can control the position of the blinds and manage exactly how much sunlight enters your home.

Wireless Control

MOVE® wireless control technology is convenient, reliable, efficient and easy to use. It can easily be linked to existing home or building automation systems. The handsets are available in One Channel remote control (allowing operation of one blind or a set of blinds), Two Channel (to operate two blinds/sets), Three Channel, Six Channel, and Eighty Channel controls.

Sun Sensors

Sun sensors can be programmed to raise and lower your blinds whenever sunlight levels exceed a certain temperature. This means you can maintain the perfect indoor temperature at all times.

Using a sun sensor can assist in reducing energy consumption, making MOVE® an environmentally friendly solution to costly heating and cooling systems.

Handhelds & Wallmounts

Our extensive range of transmitters can be mounted in any one of four different holders in a variety of colours to create a look that suits your own individual tastes.

Opla Wall Plates

Opla wall plates are an attractive slim-line choice for those seeking functionality and design.

Opla wall plates are available in a square and rectangular design and come in many different colours.

Ondo Portable + Wallmount

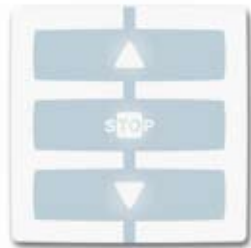

Ondo is manufactured from a shiny, dirt-resistant plastic and can be used as a fixed or portable model.

The magnetic plate can also be mounted on a wall, transforming Ondo from a portable remote control to a discreet and inconspicuous wall plate.

Stone Portable

Stone is manufactured from shock proof rubber to completely protect the transmitter. Stone is available in bright orange, white and transparent. Choose a neutral shade to blend with your interior or a bright eye catching colour so that Stone is always easy to find.

All remote controls can be mounted in a wide range of holders and wall mounts.
